

# PORTFOLIO SITE PROJECT

## DESIGN FOR THE WEB

Create a portfolio website for yourself - showing samples of your work and promoting your skills and services.

### PROJECT DETAILS

This being your own site, your online portfolio - you will need to plan out your layout and content very carefully and produce a site map as well as design mockups for your layout and interface. Only once you are clear about your final design and site plan should you start coding and producing the graphics and pages.

The purpose of your site should be to promote yourself to your chosen target group as best as you can. Focus on your image and on making an impact with your design, pay careful attention to the content organisation as well as the interface and navigation design. Make sure to establish your chosen look and feel and to maintain consistent quality of design throughout.

Present your initial ideas as well as your preferred design to the class - explaining your thought process and design decisions. This will allow you to get feedback from the group and after some consideration might influence and guide your final design.

### TECHNICAL REQUIREMENTS

- standard compliant                      all web pages need to be standard compliant, user-friendly and accessible
- browser chart                              supporting IE6 and IE7, Firefox 1 & 2, Opera, Safari
- code validation                          all XHTML and CSS code to validate without errors (some warning will be accepted)

### SUBMISSION

- start date                                      30/3/07
- deadline - drafts & presentation        18/4/07
- # final deadline - site                      15/6/07
