

RESTORE-RETOUCH PROJECT

DESIGN FOR THE WEB

Choose 3 images from the resource folder “old_images “ and restore them to presentation quality, eg for display on a website’s gallery page.

Using your newly learnt retouching techniques – edit the original images by repairing damaged areas, controlling brightness and contrast as well as colour balance. The aim is not to manipulate the subject matter but to restore the image’s quality for presentation purposes.

Remember – image restoration and retouching is a skill which needs to be practised. So take your time and don’t rush your edits – carefully working with layers as needed (remember to name your layers!). You will need to submit 3 finished images – feel free to go further and edit the rest of them as well and submit them for feedback. Practice will be the only way ;-)

TECHNICAL REQUIREMENTS

- restore images 3
- formats to be submitted psd, jpg.

SUBMISSION

- start date 10/10/08
- deadline 17/10/08
